Sealing Solutions for Floor Joints in Industrial Kitchens

Sealing Solutions for Floor Joints on Balconies

Sealing Solutions for Specialty Joints in Containment Bunds

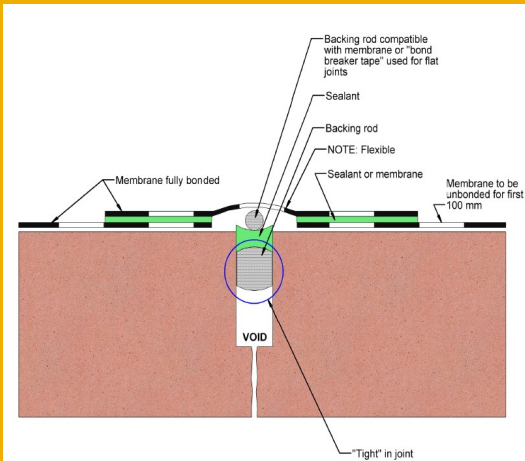

Sealing Solutions for Joints in Concrete Pavements

Sealing Solutions for Floor Joints in Pedestrian Areas

### One Way Construction Joint

### JOINT SEALANT INSTALLATION

Refer to the appropriate PDS to ensure correct solution for specific application.

**Joint Preparation** : ensure joint is clean, sound, dry & free of oil, grease & contaminants. Tape joints to ensure a cleaner caulk line.

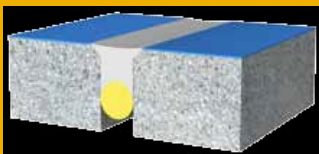

**Priming** : Refer to Primer Selection Guide for detailed information to ensure correct Primer is selected.

**Application** : Install Correct size BACKING ROD. When applying sealant avoid air entrapment.

**Tooling Off** : Will help force the sealant into the joint. Final tooling off can be done with a spatula dipped in 20% washing up detergent in water.

**Cleaning** : Use Sika Colma Cleaner to remove uncured sealant from tools etc.;

PEDESTRIAN TRAFFIC FLOOR JOINTS (Sealant is Floor Level)

HIGH TRAFFIC FLOOR JOINTS (Sealant is recessed)
